

Stop letting your health be stealthily and silently ripped off....

What 95% of candle makers don't want you to know, because if you did... you wouldn't buy their candles ever again.

Dear Candle Lover,

Candles are one of the most inexpensive and powerful ways to add atmosphere, ambience and beautiful scents to a room. Who doesn't love the soothing glow, and flattering light of a flickering candle?

But ... your candles could be polluting your air, polluting your body, and doing you more harm than good.

Paraffin wax, the basic ingredient in **95% of the world's candles**, is a **toxic** by-product of the petro-chemical (petrol) industry, and has an international toxic fume rating. It's the nasty stuff left over when big petrol companies have finished manufacturing their petrol.

And, to make even more money than the absurd amount they already do, these petrol companies sell off their paraffin wax (simply left over rubbish to them), to candle manufacturers world wide and get extra money for something nobody else would ever want.

These petrol manufacturers, and for that matter, most candle manufacturers, care little for your health. So despite the way candles are advertised as good for your health, home, and meditation practises, most are NOT.

Paraffin wax is by far the cheapest way to make candles. Those bulk packets of cheap T-lites you buy for a couple of dollars... probably almost pure paraffin wax in every one. Those cheap candles you buy at the super market - packets of pollution.

It's a simple formula... the cheaper the candle, the more paraffin wax it contains. And, people are misled into buying these candles by the dozen believing they're investing in the creation of a welcoming and calm atmosphere. Phooey, all they're buying is chemically laden air.

Candle makers are not currently required to list product ingredients anywhere on their candle or wrapper. Try playing spot the ingredients with candles while you're shopping. Ingredients listed? I think not.... Unless they're from ethical candle makers using 100% bee or soy wax, in which case you'll probably find the ingredients prominently displayed.

Not only should ingredients be listed, there should be a label on every candle containing paraffin wax..... WARNING: THIS CANDLE CONTAINS PARAFFIN WAX. CHEMICALLY SENSITIVE PEOPLE AND ASTHMATICS PLEASE TAKE EXTRA CARE.

And, heres a **double whammy** for you.

If your candle is made with any amount of paraffin wax, then it's adding toxic fumes to your air. But, if your candle is made with paraffin wax AND scented with fragrant oils (as most are), then you're **polluting your air twice over**.

Fragrant oils are man-made synthetic perfumes that simply convert to pure chemicals and disperse into your air when burned.

Don't be fooled. Many candles using 100% beeswax or soy wax as a selling point still use fragrant oils as scents. What the?! You're buying a healthy candle, but still wafting chemicals throughout your home every time you burn it.

Candle makers like this are either really sneaky, or just plain stupid. Using bee and soy wax to lull you into believing their candles are non-toxic, and then mixing in cheap chemical scents to counteract their health giving properties. (That way they don't have to increase the price of their candles to cover the use of pure, all natural essential oils).

The reverse is also true. Candles scented with pure essential oils sound enticing and therapeutic. And indeed, essential oils are clinically proven to have medicinal and mood altering effects. But, what good if the essential oils are blended with a candle containing paraffin wax that gives off toxic fumes every time you light it?

The best, and hardest to find combination? Pure beeswax and pure essential oils.

This is a rare combination indeed, and candles made with these ethical and health giving properties do cost more - but it's a small price difference considering the big difference to your personal environment.

Beeswax burns far longer and cleaner than paraffin wax. It produces a golden flame that no other wax can emulate. Combined with essential oils of lavender, lemongrass, ylang ylang, rose geranium, or many others, beeswax candles become a true tool in creating a warm, welcoming, unforgettably scented, and HEALTH promoting atmosphere.

If you'd like to stop polluting your home with paraffin wax and fragrant oil based candles and experience the pure beeswax and pure essential oil difference, give me a call or drop me an email.

All my candles are handmade using 100% pure beeswax and pure essential oils. Each candle is embossed with a Celtic Symbol for extra spiritual effect.

I guarantee you'll enjoy your pure beeswax candles, or I'll give your money back.

Yours in good health and true candle enjoyment,

XXXXXXXX.

PS. If you're serious about your health, then please don't overlook this little known information and bring unnecessary chemicals into your home.

PPS. Candles are meant to promote a peaceful, calm, beautiful atmosphere within your home. Natural is always the best way to go to achieve this type of vibe, synthetics are cheap, nasty imitations of the real thing.
